

Infrared Thermography Report
ADI BRANDON, MS
AMMONIA COMPRESSOR DRIVE MMC
DECEMBER 2021

\$FLIR

CLASS I: A defect or defects are present that are likely to cause a problem in the long term (2-6 months). Should be addressed in the normal course of maintenance scheduling.

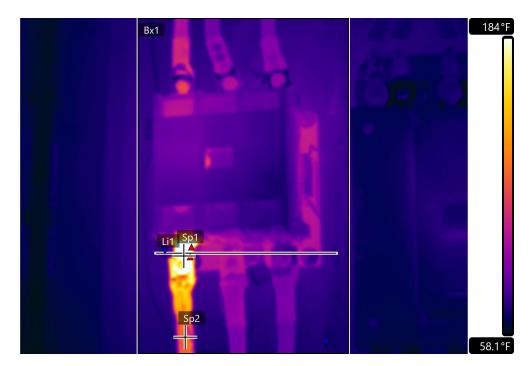

CLASS II: A defect or defects are present that are likely to cause a failure in the short term (less than 2 months). Should be addressed as soon as practical, on a high maintenance priority. Consideration should be given to increase monitoring frequency.

CLASS III: A defect or defects are present that make continued component reliability unpredictable and likelihood of secondary damage is high. Consideration should be given to an unscheduled shutdown to correct.

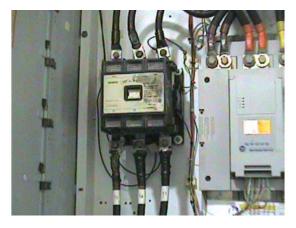

Component	Motor Starter A Phase Load Side
Equipment/Bucket ID	Ammonia Compressor 3 MCC

Sp1	185.4 °F
Sp2	140.7 °F
Li1 Minimum	73.3 °F
Li1 Maximum	187.2 °F
Bx1 Minimum	67.1 °F
Bx1 Maximum	207.7 °F

Fault	Loose Connection
Defect Rating	CLASS II

Recommendations

IR image shows over 80 degrees F delta on A phase to B and C phases This indicates connection issue. This is either at the lug connection or internal of the starter. Inspect and repair soon.
