

MILLINGTON, TN

May 21, 2020

Lucite

Subject: May vibration report

Most of the machines surveyed were found to be in good condition with the exception of the following:

QualiTTest® uses a four step rating system for defects.

Class I: Defect is present, but effect on reliability is not clear; no immediate action is required. Continue to normally monitor.

Class II: Defect (s) present that may cause problem in long term (2-6 months.). Repair during normal maintenance scheduling. Continue to monitor.

Class III: Defect (s) present that may cause failure in short term (less than 2 months.). This should be addressed as soon as practical, with a high maintenance priority. Increase monitoring frequency.

Class IV: Defect (s) present that makes continued reliability unpredictable, and possibility of secondary damage is high. Repairs should be made ASAP. An unscheduled shutdown should be considered for repairs

Hi-Speed Industrial Service tests and inspects industrial machinery and equipment and makes recommendations concerning maintenance and repairs based on its experience in the field of industrial repair and maintenance. The information contained herein is provided as an opinion only, not as a guaranty or warranty of the matters discussed herein.

This completes our assessment of your equipment for this survey. Thank you for your business and don't hesitate to call if you have any comments or questions.

Sincerely,

David W. Shook
Senior Reliability Specialists
Hi-Speed Industrial Service

Detailed Defects

SAR 03 Turbine Compressor Main Blower

The data seems to indicate the proximity probes have been switched to indicate proper orientation. This will help to better identify actual location of anomalies. The vibrations are also mostly down for the compressor readings after recent service; however, we are going to keep this unit under surveillance due to the harmonics still seen in the data and **Rated this a Class I Defect for now.**

SAR 78B Cooling Tower Fan 2

The vibration data indicates the motor was replaced. No further actions are warranted.

MON132 Decanter Feed Pump Spare

A high 1xRPM vibration still appears to be in both the pump and motor bearings in the vertical. Inspect the unit for loose fasteners and structural issues. Check the coupling for wear and perform an alignment check and a shaft run out check. **Rated a Class II Defect.**

ACN 13B #2 Kettle Transfer Pump

The inboard motor bearing is showing signs of distress. Non-synchronous vibration harmonic peaks are evident in the data; however, the overall level has not changed much lately. We suggest replacing the motor this year. **Rated a Class II Defect.**

SAR55A Neutralization Pump North

Data indicates a sudden change in the motor bearings since the last survey. We believe they are in distress. Recommend replacing the motor in the next few months or possibly sooner. **Rated a Class II Defect for now.**

Observations

MON65 Amide Reactor Circulation Primary

The motor 1x rpm vibration has returned to normal for the unit; however, we would like to see it lower. Inspect as time allows. We will watch for changes. **Rated a Class I Defect.**

MON56 Inhibited MON transfer pump E

The overall vibration seems to zigzag up and down. The pump axial is at 0.34"/sec velocity peak and consists mostly of noise around 2-5 orders of shaft speed. We suspect recirculation caused by either pump wear or not running near the optimal point on the curve. Inspect as time allows. **Rated A Class I Defect.**

SAR 10 Process Air Fan E

Almost 4 g's RMS acceleration is still evident in the data. Higher speed fans like this one will usually generate more normally, so we will watch this unit closely. Make sure bearings are lubricated for service and environment. **Rated a Class I Defect.**

Pump ACN36 ACN Neutral Tank Circulation

The axial vibration is down 50%; however, the pump horizontal is still at 0.44"/sec velocity peak mostly at what looks to be vane pass (4x rpm). Inspect flow parameters and finally the pump internals if no other obvious issues are found. **Rated a Class I Defect.**

SAR66E Vertical Cooling Tower Pump 5

This unit still seems to have a sub-synchronous vibration in the motor as well as a slight rotor bar vibration. Some points look like a bad reading. There is also a slight sub synchronous peak just above 0.4 orders, which could indicate a bearing cage issue. We will watch this unit closely. **Rated a Class II Defect for now.**

SAR66B and SAR 66C Vertical Cooling Tower Pumps 2 and 3

These pumps still have a 1xRPM vibration at near 0.4"/second velocity peak. The vibration should be lowered if possible. Trim balancing might help if the unit is out. Check all fasteners for tightness and the shafts if possible, for runout. **Rated A Class I Defect.**

ACN28B ACN Fan E

A 1xRPM still dominates the velocity spectrum for the motor inboard vertical at 0.45"/sec velocity peak. Inspect the motor and structure. Inspect, clean, and trim balance the fan in the near future if possible. **Rated a Class II Defect.**

ACN13B #2 Kettle Transfer Pump South

The inboard motor bearing is showing signs of distress.

Non-synchronous vibration harmonic peaks are evident in the data; however, the overall level has not changed much lately. We suggest replacing the motor this year. **Rated a Class II Defect.**

MON 80 Uninhibited MON Tank Pump North

The motor Vibrations have dropped considerably. We will continue to watch this unit for changes. No further action suggested.

SAR 78A Cooling Tower Fan 1

The reported motor vibration has dropped somewhat. It is still above what we would like to see, but it's most likely normal for its use. No further action is required at this time.

SAR57B Oleum Tower Circulation Pump B

Recent vibration data now suggests cavitation is the main issue in the pump. There could also be wear in the pump bearings. Inspect the unit for operation in the optimal part of the pump curve. Cavitation can destroy the impeller quickly if unabated as well as other pump components. **Rated a Class II Defect.**

MON55NM Hut Pump North

Vibration data suggests the pump is not operating properly. We suspect the pump is not running in the curve at the optimal point. Inspect as time allows. **Rated a Class I Defect.**

SAR39A Boiler Feed Water Pump NW

The motor data shows 1x and 2x vibrations. We recommend inspecting the coupling and insert. Perform an alignment if possible. **Rated a Class I Defect.**

SAR127 Final Tower Pump Out Drain Pump

Route notes indicate unit has a leaking seal even though it wasn't running. Please inspect and repair.

Reported prior but not running this survey**ACN29B ACN Cooling Tower Pump M**

There still appears to be electrical, rotor bar and possibly bearing issues in the motor. The main vibration is above the Spectrum F max. Check the electrical connections, current and voltage and all fasteners as time allows. We will watch for changes going forward. No action required at this time.

Rated a Class I Defect.

Raw Data for Route 1, 2 and Quarterly

Abbreviated Last Measurement Summary *****
