

February 2, 2022

Mitsubishi Chemicals

Subject: February vibration report

Most of the machines surveyed were found to be in good condition with the exception of the following:

QualiTest® uses a four-step rating system for defects.

<u>Class I:</u> Defect is present, but effect on reliability is not clear; no immediate action is required. Continue to normally monitor.

<u>Class II:</u> Defect (s) present that may cause problem in long term (2-6 months.). Repair during normal maintenance scheduling. Continue to monitor.

<u>Class III:</u> Defect (s) present that may cause failure in short term (less than 2 months.). This should be addressed as soon as practical, with a high maintenance priority. Increase monitoring frequency.

<u>Class IV</u>; Defect (s) present that makes continued reliability unpredictable, and possibility of secondary damage is high. Repairs should be made ASAP. An unscheduled shutdown should be considered for repairs

Hi-Speed Industrial Service tests and inspects industrial machinery and equipment and makes recommendations concerning maintenance and repairs based on its experience in the field of industrial repair and maintenance. The information contained herein is provided as an opinion only, not as a guaranty or warranty of the matters discussed herein.

This completes our assessment of your equipment for this survey. Thank you for your business and don't hesitate to call if you have any comments or questions.

Sincerely,

David W. Shook Senior Reliability Specialists **Hi-Speed** Industrial Service dshook@gohispeed.com

Observations

ACN13B #2 Kettle Circulation Pump

Motor bearing data still shows outer race defects in the inboard bearing. The vibrations have not changed much recently. We will watch this carefully going forward. Rated a Class II Defect.

ACN22 ACN Ref Booster Pump #2

The motor and pump axial vibrations are still elevated 4x shaft speed. We suspect a pump issue. Ensure the pump is operating properly in the correct point on the performance curve. Inspect the unit for loose fasteners, alignment, and coupling wear at time allows. **Rated a Class I Defect.**

ACN29A ACN Cooling Tower Pump North

Pump data continues to suggest cavitation. Check for proper pump operation. Rated a Class I Defect.

ACN29C ACN Cooling Tower Pump South

Pump bearing data still shows non-synchronous harmonic peaks in the spectrum. Vibrations are most likely low amplitude bearing defect frequencies. A more detailed analysis could be provided if we had the bearing numbers in the database. **Rated a Class I Defect.**

ACN36 ACN West Tank Circulation Pump

The pump inboard horizontal and axial vibrations are still elevated, especially at 4x shaft speed. We suspect an impeller vane pass vibration, or possibly a coupling issue. Check to make sure the pump flow and pressure are at design levels. Inspect the coupling also. **Rated a Class I Defect.**

MON 36 Irganox Mix/Feed Pump

Non-synchronous harmonic vibrations are still strong in the pump. The pump could be worn. Inspect as time allows. Rated a Class II Defect.

MON32B ARC Reflux Pump S

The pump inboard vibrations show multiple shaft speed harmonics with the 5x shaft speed dominant. There are also a few non-synchronous peaks. We suspect slight wear in the pump and possible a process issue. We will continue to monitor for changes. **Rated a Class I Defect.**

MON 38CNM LBS Tails Pump N

Vibration data shows an increase in the floor between 2.5 and 3.0 KHz in the spectrum for the motor bearings. We suspect bearing defects are present. Ensure adequate bearing lubrication if applicable. Prepare to change out the motor in the future. **Rated a Class II Defect.**

MON 40 Acetone Pump

The motor inboard bearing vibrations have increased slightly again. A few peaks can possibly be attributed to rotor bar passing frequencies which generally are not usually a problem. We will keep a close eye on this unit. **Rated a Class I Defect.**

MON 55SM Hut Pump S

Vibration data for the motor bearings show possibly early defects are present. There is pulsing in the time waveform. Ensure the motor bearings are lubricated. We will watch for changes. **Rated a Class I Defect.**

MON 63E LBS Side Stream Pump East

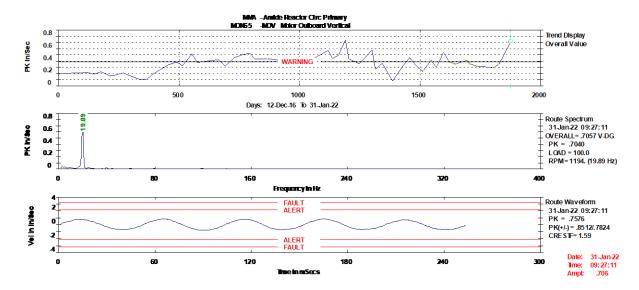

Data still shows non-synchronous harmonic vibration peaks in the motor bearings. No immediate concern yet. **Rated a Class I Defect.**

MON 63W LBS Side Stream Pump West

Vibration data still shows synchronous and non-synchronous peaks in the spectrum for the motor bearings. We suspect bearing defects are present; however the database does not have the bearing defect frequencies in the analysis parameter fault frequency sets. Ensure adequate bearing lubrication if applicable. Prepare to change out the motor in the future. **Rated a Class II Defect.**

MON 65 Amide Reactor Circulation Primary

The motor is showing a large increase shaft speed vibration in the vertical measurements. Unit is mounted on spring isolators which could affect the amplitudes. Inspect all fasteners, structures and coupling. Rated a Class III Defect.

MON 81 Uninhibited MON Uninhibited Tank Pump S

Vibration data shows an increase in the floor between 2.5 and 3.0 KHz in the acceleration spectrum for the DE motor bearing. We suspect bearing defects are present. Ensure adequate bearing lubrication if applicable. Prepare to change out the motor in the future. The pump input bearing is also showing an increase in the acceleration noise floor and could indicate bearing wear, lubrication loss, or process issues. Inspect for defects. **Rated a Class II Defect.**

MON 84 WCM Tails Pump South

The pump drive end vibrations have dropped. No further action needed.

MON 85E Water Treatment Pump East

The pump inboard horizontal vibration is slightly elevated at 5x shaft speed. Ensure the pump is operating properly in the correct point on the performance curve. **Rated a Class I Defect.**

SAR 03 Turbine Compressor Main Blower

Vibrations in the compressor are normal. Nonrated this month.

SAR 10 Process Air Fan E

The fan bearings were recently replaced, and the high 1x RPM vibration has dropped significantly, however, the new bearings are showing excessive vibrations in the acceleration data. This could be due to many factors including excessive belt tension, sheave misalignment, cocked bearings, excessive axial loading, incorrect clearances, poor lubrication, lubrication contamination, improper lubrication, or possibly defective bearings. We still recommend inspecting for these issues as time allows. Rated a Class II Defect.

SAR1 13 Combustion Air Fan East

The fan bearing data still shows what looks to be low amplitude shaft speed harmonics which could indicate possible looseness. We need to confirm the shaft speed. Check all fasteners and perform a lift check on the fan shaft. **Rated a Class I Defect.**

SAR 14 Combustion Air Fan West

The data still indicates distress in the inboard motor bearing. We only see about 1.6 g's RMS overall for the horizontal measurements. The fan bearings show a raised noise floor in the acceleration spectrum and impacting in the time domain as well as a few low amplitude harmonics of the fundamental speed. This could be distress in the bearings, lubrication, mechanical looseness, or some other anomaly. Ensure the bearings are lubricated if applicable. We will keep an eye on this unit in the future. No other action is required at this time. **Rated a Class I Defect.**

SAR 39A Boiler Feed Water Pump

Large drop in motor drive end vertical vibration. No further action required.

SAR 39D Boiler Feed Water Pump

Motor bearings are in some distress. Ensure proper lubrication if applicable. Rated a Class II Defect.

SAR55B Neutralization Pump South

The data continues to show signs of early distress in the inboard motor bearing. Ensure the motor bearings are lubricated if applicable. We will keep an eye on this unit in the future. **Rated a Class I Defect.**

SAR 63 EM Spent Acid Feed Pump E

The pump inboard bearing vibration data still indicates slight issues that are most like bearing defects. Ensure the bearings are lubricated. **Rated a Class I Defect.**

SAR 66 B, C Vertical Cooling Tower Pumps

These units still have high vibrations at near ½" per second velocity overall. Vertical pumps are susceptible to imbalance and resonance. Some sheet metal covers prevent good bearing data to be collected. Inspect units for fastener and structure issues. Trim balancing might help. **Rated a Class I Defect.**

SAR78A Cooling Tower Fan #1

The motor continues have an elevated 1x RPM vibration in the axial measurements. Inspect the fasteners, structure, coupling and alignment as time allows. **Rated a Class I Defect.**

SAR 137A Contain Pit Pump North

The 5x RPM vibration has dropped. No further action needed.

SAR161A-N SAR Cool Tower Fan W

There is still a slightly elevated motor axial vibration at 1x, 2x, and 3x RPM of motor shaft speed. Check the coupling and alignment and all fasteners. **Rated a Class I Defect.**

Previously reported equipment but not running this survey

ACN 07C ACH Product Feed Pump South

The vibration data still shows what looks to be outer race defects in the motor inboard bearing and non-synchronous frequencies in the inboard pump bearings which are also most likely bearing defect harmonics. There could be a little cavitation also. We will keep an eye on this unit in the future. No action is required at this time. **Rated a Class I Defect**

ACN 13A #2 Kettle Transfer Pump North

Vibration data still shows non-synchronous peaks in the spectrum for the motor bearings. We suspect race bearing defects are present since the frequencies match the overlay. Ensure adequate bearing lubrication if applicable. Prepare to change out the motor. Rated a Class III Defect.

ACN 14 ACH Off Grade Pump

The data still shows signs of slight distress in the motor bearings. We see 2 to 3 g's RMS overall for the horizontal measurements. There seems to be long intervals between collected data, and the defects seem to have been there for some time. We also see an elevated vertical vibration in the motor at shaft speed above 0.4:/second velocity peak. Inspect the coupling and fasteners and have the alignment checked and adjusted if needed. **Rated a Class II Defect**

ACN28B ACN Fan East

The motor drive end vertical vibration is still elevated at shaft speed. Inspect for loose fasteners and coupling or alignment issues. **Rated a Class I Defect.**

MON 45 EM ACH Ref Brine Pump East

Data for the motor outboard bearing shows possible outer race defects. We will watch this unit carefully going forward and recommend action as required. **Rated a Class II Defect.**

MON 55 MM Hut Pump Mid

Pump vibration data shows what looks to be cavitation. Check for proper operation. **Rated a Class I Defect.**

MON132 Decanter Feed Pump Spare

The pump inboard vertical inboard vibration is still slightly elevated 1x shaft speed. Inspect the unit for loose fasteners, alignment, and coupling wear at time allows. **Rated a Class I Defect.**

SAR 38 Drying Tower Pump-out

The pump inboard horizontal vibration is still slightly elevated, especially at 1x shaft speed. Inspect the unit for loose fasteners, alignment, and coupling wear as time allows. Also ensure the pump is operating properly in the correct point on the performance curve. **Rated a Class I Defect.**

SAR 39C Boiler Feed Water Pump Northeast

We still see a slight shaft speed vibration in the motor outboard. Inspect the motor and drivetrain as time allows. Rated a Class I Defect.

SAR 50A Drying Tower Circulation Pump West

We see a slight increase of the shaft speed vibration in the motor. Inspect the motor and motor cooling fan, and drivetrain as time allows. **Rated a Class I Defect.**

SAR222 Oleum Tower Drain Pump

Inboard pump bearing still has multiple synchronous and non-synchronous vibration peaks. Overall acceleration is over 3g's RMS. The bearing is in distress. Ensure they are lubricated properly. We will watch carefully going forward. **Rated a Class II Defect.**
