DECEMBER 15, 2021

SOUTHER COTTON OIL
Memphis, TN

The following is a summary of findings from the December 2021 vibration survey at Southern Cotton Oil .

QualiT[®] uses a four step rating system for defects.

Class I: Defect is present, but effect on reliability is not clear; no immediate action is required. Continue to normally monitor.

Class II: Defect (s) present that may cause problem in long term (2-6 months). Repair during normal maintenance scheduling. Continue to monitor.

Class III: Defect (s) present that may cause failure in short term (less than 2 months). This should be addressed as soon as practical, with a high maintenance priority. Increase monitoring frequency.

Class IV: Defect (s) present that makes continued reliability unpredictable, and possibility of secondary damage is high. Repairs should be made ASAP. An unscheduled shutdown should be considered for repairs

Hi-Speed Industrial Service tests and inspects industrial machinery and equipment and makes recommendations concerning maintenance and repairs based on its experience in the field of industrial repair and maintenance. The information contained herein is provided as an opinion only, not as a guaranty or warranty of the matters discussed herein.

North Condenser Wash Pump

The vibration data shows a very high 1x of over 2 inches per second on motor and pump.

. Check all bolts, alignment and coupling this is a **Class IV defect**

High Pressure Boiler Combustion Blower

The vibration data is a very high 1x of over .4 inches per second on motor this is a direct fan mount to the motor. This is an indication of out of balance, clean and inspect fan for damage and looseness this is a **Class III; defect**

Conditioner Aspiration Fan

The vibration data indicates significant wear in the fan bearings the movement is over 1.7 inches per second.

Replace bearings check shaft for wear, replace shaft if out of tolerance. this is a **Class IV defect**.

#1 Flaking Roll

The vibration data indicates lot of noise in the rolls we will need to collect more data in the future for trending. This is a **Class I defect**

#3 Flaking Roll

The vibration data indicates a lot of noise in the rolls we will need to collect more data in the future for trending. This is a **Class I defect**

#4 Flaking Roll

The vibration data indicates a lot of noise in the rolls we will need to collect more data in the future for trending. This is a **Class I defect**

Meats Conditioner Aspiration fan

The vibration data indicates looseness in the motor. Check for loose motor bolts and motor base, check pulley for wear. **This is a Class II defect**

Meats Conditioner

Vibration data indicates possible loose bolts in motor or possible soft foot. Check for loose bolts and soft foot. **This is a Class II defect**

Collet Cooler Fan

The vibration data indicates a high 1 time of .494 inches per second. Clean fan and inspect for damage check bolts for tightness. **This is a Class II defect**

Safety Aspiration Fan

The vibration data indicates a high 1 time of .542 inches per second. Clean fan and inspect for damage check bolts for tightness. This is a **Class II defect**

East Deodorizer Pump

The pump has high vibration check the pump coupling and pump shaft for runout, also check the pump impeller for damage. This is a **Class II defect**

North Hot Well Pump

The pump has excessive wear on the bearings, change pump as soon as possible this is a **Class IV defect**.

Condex Flue Gas Supply Fan

The vibration data indicates a high 1 time of .947 inches per second. Clean fan and inspect for damage check bolts for tightness. This is a **Class IV defect**.

Flaking Roll Aspiration Fan

The vibration data indicates significant wear in the fan bearings clean fan and replace bearings check shaft for wear, replace shaft if out of tolerance. this is a **Class IV defect**.

East Vacuum Oil Dryer

The vibration data indicates significant wear in the pump bearings replace pump. this is a **Class II defect**.

East Hexane Work Pump

The pump has high vibration check the pump coupling and pump shaft for runout, also check the pump impeller for damage. This is a **Class II defect**

South Water Draw Off Pump

The pump has high vibration check the pump coupling and pump shaft for runout. This is a **Class II defect**

North Water Draw Off Pump

The vibration data indicates multiple harmonics of 1 time running speed on motor and pump.
. Check all bolts, alignment and coupling this is a **Class II defect**

South 1/2 Miscella pump

The vibration data indicates multiple harmonics of 1 time running speed on motor and pump.
. Check all bolts, alignment and coupling this is a **Class II defect**

North Full Miscella Pump

The vibration data indicates wear in the motor bearings. Replace motor and new alignment to pump. this is a **Class III defect.**

South Mineral Oil Pump

The vibration data indicates wear in the motor bearings. Replace motor and new alignment to pump. this is a **Class III defect.**
